TITEL : Convergence of Embedded Intel Atom platform and Microsoft Embedded.

ABSTRACT :

The evolution of the various platform has expanded tremendously, hence the challenge of the engineer of today is large but at the same time interesting.

We see that in the past speed and interoperability was mandatory whilst now enhanced graphics, power consumption, Microsoft embedded and off products are the key for improving a fast time to market of your current project and your future projects.

During the session Koning & Hartman will introduce two established project within two major vertical segments retail and kiosk.

Koning & Hartman will highlight what the customers challenges were and as well our own and how we came to our value proposition.

About Koning & Hartman

Employing more than 550 people, Koning & Hartman focuses on delivering products and services for industrial, telecoms, cable and energy-related infrastructure – total solutions that make the business processes of our clients better, faster and more cost-efficient. Thanks to our expertise, our company enjoys a unique position on the market for industrial and telecoms solutions. We are active in many market segments: telecoms, public transport, water management, energy, the public sector, OEM, the food and beverages industry, pharmaceuticals, public order and safety, and in the financial services sector. Our head office is located in Amsterdam, with our other offices in Delft, Veenendaal (The Netherlands) and Vilvoorde (Belgium).
